

CSC 110 — More Loops

Name: _____ Date: _____

1. Here is the code from Tuesday's lab exercise.

```
var word = prompt("Enter a word", "");
document.write("<ol>");
for(var j = 0; j < word.length; j ++) {
    document.write("<li>" + word.charAt(j));
}
document.write("</ol>");
```

Modify this code to print out the word in a vertical table, one letter per cell.

b
a
t

2. Now alter the code so that the letters appear in a horizontal table.

b	a	t
---	---	---

3. How would you change the code so that it would print out the number of minuscules (small letters) in input?
4. What about the number of vowels in the input?
5. [extra credit] What about the number of words? (Remember that words can be separated by more than one space.)
